

PREPARED FOR GARY WEBB, SUPPLY-IT

A brand and a new website for your move to selling direct to the public

Two pieces of work. First, agreeing how the new consumer business is positioned, what it stands for and how it looks, with the identity designed by a senior creative team. Then the website to sell it, built with AI so your own team can update it themselves. Done properly, end to end, in about a month, for a fixed price of €12,000.

Quality first, then build fast

IRELAND'S MARKETER OF THE YEAR, 2022

Before I build anything, I ask one question: what does really good look like here? Not what is quick or cheap, but the version of this work I would want to stand over.

So I start where I always have. If I were doing this the traditional way, what team would I hire to do it properly? For a launch like yours that is a brand strategist to set the positioning and the messaging, a strong creative team to design the identity, and a web team to build and run the site. **I map that team first, then do exactly that work, with a small team and AI instead of a large and slow one.**

Twenty years in brand is what tells me where the quality bar sits: Head of Brand at O2 Ireland, then CMO at the National Lottery, and Head of Brand at Indeed and Miro, both global roles. Positioning, messaging and tone are agreed first, then built into everything that follows.

WHO I WORK WITH

Moloco

Heineken

Norcros

Alltech

Smurfit

Hostelworld

Eaton Square

Weatherbys

"His command of marketing science as well as his instincts for great thinking and ideas are, in my opinion, superb."

Peter Field · The Godfather of Effectiveness, author of The Long and the Short of It

"Paul reported into me as Head of Brand when I was at Indeed. I have learned more from him than anyone else in my career."

Paul D'Arcy · CMO, Moloco. Former CMO at Miro and Indeed

What we would build for Supply-IT

This comes from our conversation. Supply-IT has spent fifteen years as a trade supplier, selling phone and computer parts to repair shops across Ireland, and it has done that well on next-day delivery and word of mouth, with almost no marketing. You are now opening to the public for the first time, with a shop in Cork and a new consumer website. That is a different job. A trade customer knows exactly what they want and comes to you for it. A member of the public arrives cold, decides in a few seconds whether to trust the brand, and needs to be guided to the right product. The two pieces of work below are what that shift needs, in the order we would do them.

PART ONE

Positioning, messaging and a brand identity

We start by agreeing how the new consumer business is described and sold, because everything after it depends on this: who it is for, what it does that the alternatives do not, and how you want it to feel the moment someone lands on it. You already have the raw material. You deliver anywhere on the island next day, you carry the parts nobody else bothers to stock, and you can use AI on the site to tell a customer exactly which charger or part they need from a photo. The job is to turn that into a clear position and a short set of messages that everything then uses.

Once the position is agreed, we design the identity: the name, the logo, the colours, the type and the overall look. For this I bring in a senior creative team I have worked with for years, including on brand work at the National Lottery, so you get genuinely high-end creative rather than a template. As we discussed, this is the part that decides whether a first-time visitor trusts you enough to buy. When a brand is new and competing on price, looking established and premium is what earns that trust.

PART TWO

The website

Building a consumer website has usually meant a designer, a developer and someone to manage both, over several months. We do that work with AI instead, which will make sense to you, because you already use AI on your own site and build things in-house. It starts from the positioning and identity above, so the site is built in the new brand from the start, rather than designed once and then handed to a developer to reproduce.

Once a site is built this way, you own it and you can change it. Adding a page, a seasonal offer or a new product range takes minutes, and your own team can do it by typing what they want in plain English. That matters here: you told me the stock lead times are long and the year runs to a calendar, from spring to back-to-school to Christmas, and a site the team can update themselves keeps up with that without waiting on anyone. It is deliberately a focused site, not hundreds of pages, covering what the launch needs and growing from there.

WHAT IT COSTS

Two pieces of work, one price

The positioning, messaging and identity come first, then the website is built on top of them. One price covers both.

PART ONE

Positioning, messaging and identity

- › How the consumer brand is positioned: who it is for and why it is chosen
- › The core messages, written once and used everywhere
- › The brand identity, designed with a senior creative team
- › Simple guidelines your team can apply themselves

Done first, because the website is built on top of it.

PART TWO

The consumer website

- › A focused consumer site built and deployed in your new brand
- › Not hundreds of pages: what the launch needs, then grown from there
- › Updatable by your own team in plain English, without an agency
- › Set up on your own hosting, in your ownership, with a handover

Built on the agreed positioning and identity.

BOTH PARTS, FIXED PRICE

Positioning, messaging and identity, then the website, done end to end in about a month.

€12,000

plus VAT • about one month

WHAT THE PRICE COVERS

The positioning and messaging, the brand identity designed with a senior creative team, the website built and deployed, and the handover so your team can run and update it themselves.

WHAT IT DOESN'T

A few subscriptions in your own name, which we set up with you and do not mark up: Claude Code to build and update the site, Vercel for hosting, which is inexpensive, and roughly two hundred euros of image generation. We take nothing on these.

How we keep this to €12,000

Work like this, done the traditional way, usually runs to tens of thousands and takes months. A positioning and identity project alone can be forty to sixty thousand euros through an agency, before a website is even started. We can do both, properly, for twelve thousand, and there are a few specific reasons why.

REASON ONE

The cost goes on the work, not around it

Most of the cost and time in agency work does not go on the work itself. It goes on presentations, on selling ideas back and forth, on layers of account management, and on reworking things two and three times because decisions were slow or unclear. Take that out and what is left is the actual thinking and building, which is the part that matters.

REASON TWO

We use AI to prototype quickly

Rather than describe an idea in a document and wait weeks to see it, we build a working version fast, look at it, and change it. You react to something real instead of a description, which removes most of the back and forth that usually slows a project down and runs the bill up.

REASON THREE

Discipline on both sides

You make decisions quickly and clearly, and we move fast without padding the process. When those hold, we can do genuinely high-quality work at speed and get the whole thing done end to end in about a month. If decisions stall or the scope keeps growing, that is what pushes cost and time up in any project. Keeping it tight is how the number stays where it is.

Book a time to chat

A short call is enough to talk it through. Book a time at cal.com/paul-dervan-mjfd50, or email me directly at paul@runwithfoxes.com.
