

Move **Kite**'s whole marketing team up the AI scale

PREPARED FOR SARAH NOLAN, KITE INSURANCE · PRIVATE

01

What this is

You asked what changing the way the team works would actually involve. This page is that: a snapshot of the work and how we do it. I have focused on the areas I think matter most for a marketing team like yours, at fourteen people across three lines of business: how roles and structures are going to change, how a whole team adopts AI, how you measure whether it is working, and the agents we build.

02

What we do

Quality first, then automate

Before I build anything, I ask one question: what does really good look like here? Not what AI can do, but what the best version of this marketing would be, and the level of quality and effectiveness I would want to stand over.

So I start where I always have. If there were no AI at all, what team would I hire to do this properly? I map that team first, the one I would build in a world before any of this existed.

Then I build exactly that, with agents instead of hires. The quality bar is set by the team I would have wanted, not by whatever a tool happens to make easy. Twenty years in brand is what tells me where that bar sits: Head of Brand at O2 Ireland, then CMO at the National Lottery, Head of Brand at Indeed and Miro, both global roles. Positioning, messaging and tone written first, then built into everything the agents make.

Ireland's Marketer of the Year, 2022 · Who I work with: Moloco, Heineken, Norcros, Alltech, Smurfit, Hostelworld, Eaton Square, Weatherbys

"His command of marketing science as well as his instincts for great thinking and ideas are, in my opinion, superb."

Peter Field, The Godfather of Effectiveness, author of The Long and the Short of It

"Paul reported into me as Head of Brand when I was at Indeed. I have learned more from him than anyone else in my career."

Paul D'Arcy, CMO, Moloco. Former CMO at Miro and Indeed

03

What Run with Foxes does

I firmly believe that marketing structures, marketing teams and marketing roles are going to change dramatically in the next few years, and the work we do is all around that. Specifically, there are four buckets to what we currently do. We train teams. We build AI agents and capabilities for them, or with them. We work with marketing leaders to re-imagine what future workflows could look like, and we design AI adoption programmes for them.

04

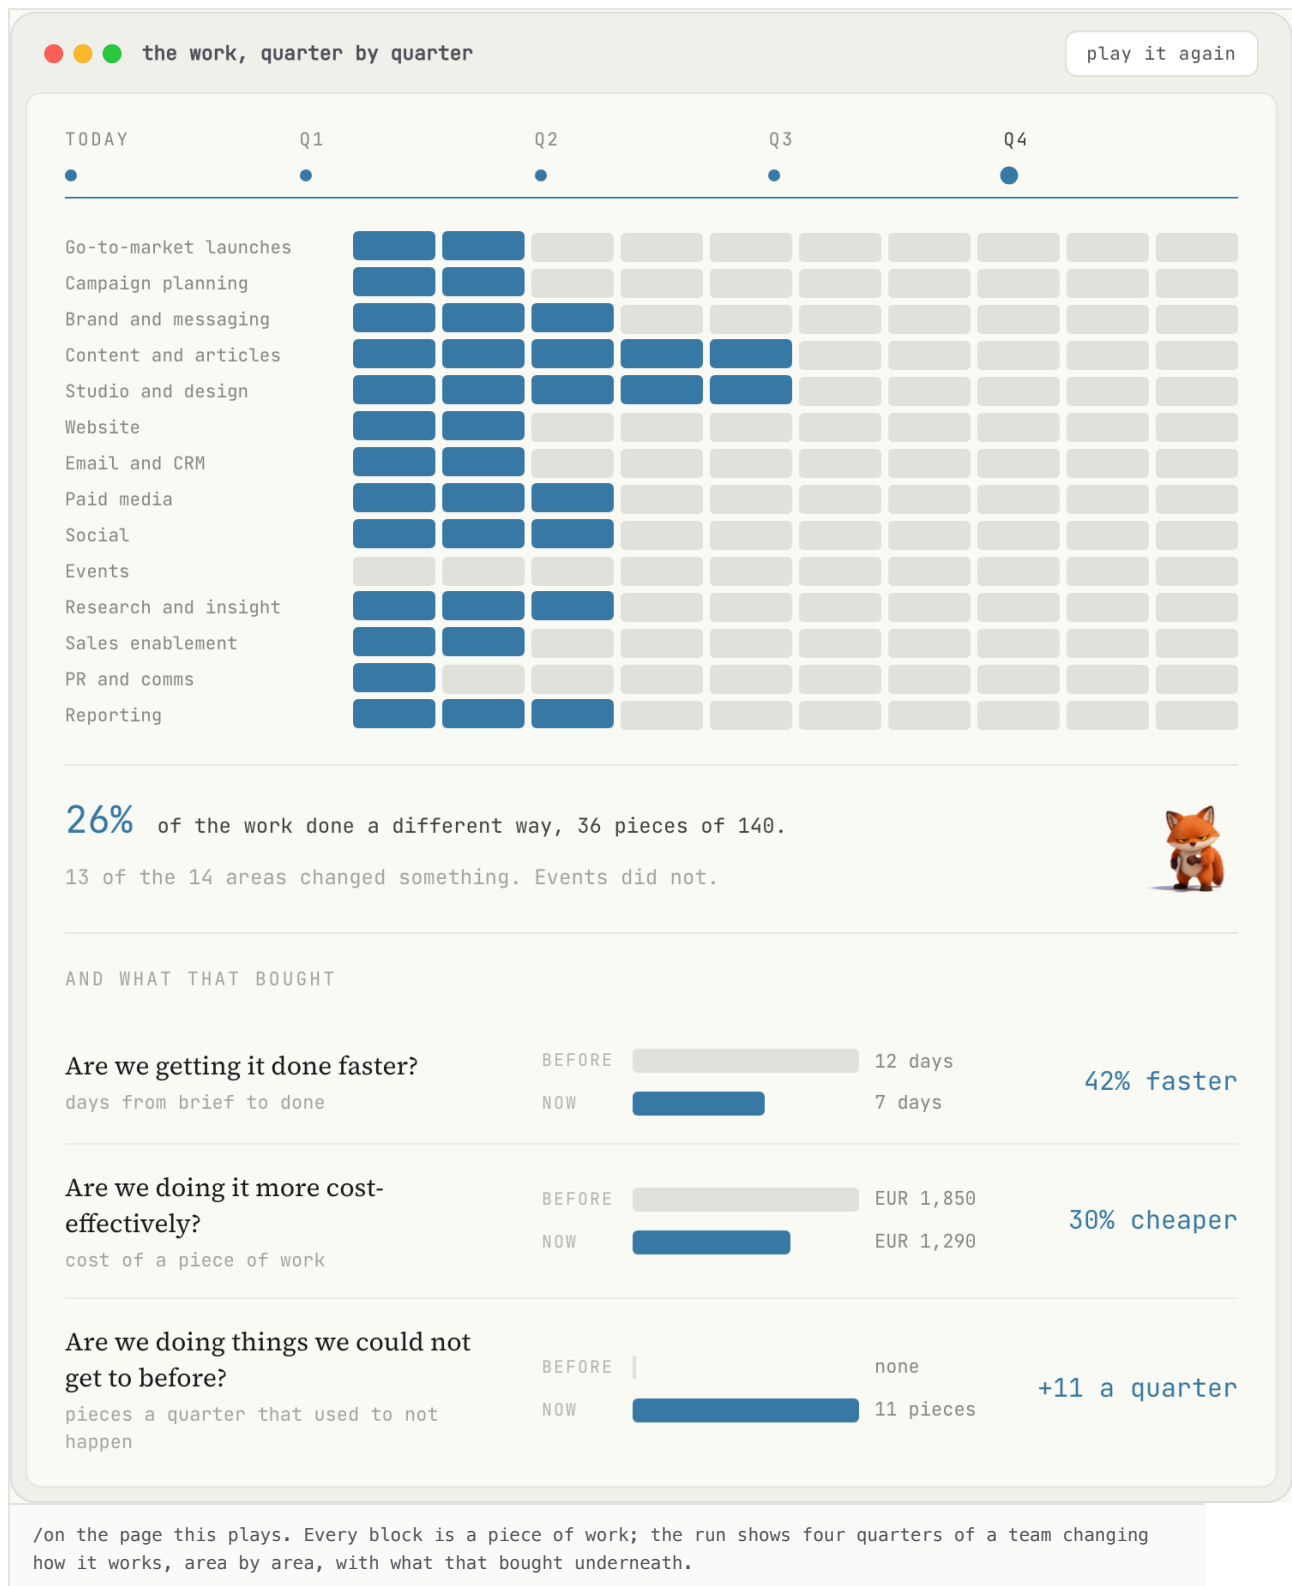

Rethinking the roles

Individual productivity gets you started. Make everyone on a team a little faster and the work still queues in the same places, because the bottleneck just moves down the line. The process, the people and the policies have to change together, and that starts with what each role actually is.

We start by laying out the work to be done, not the team chart. Then we redesign how that work gets done and remove the handovers.

Designing team AI adoption

Not everybody is going to be a builder, and that is fine. I suspect every marketing team will soon have at least one person who builds, and who helps the other teams with their work. What we measure is simple: pieces of work that are now done a different way, not logins or prompt counts.

Training teams

Firstly, there is a free course, AI Fluency for Ambitious Marketers, for anybody on your team. We also run training sessions for marketing, sales and go-to-market teams. These range from half a day to full-week sessions. We cover a range of topics, from pure productivity hacks to building agents and systems. System thinking is a core skill for marketing in an AI world.

The screenshot shows a web browser window with the title "the course, module one" and a "free, live now" button. The URL is "/Runwithfoxes". The page content includes a chat window titled "isa" with a message: "I'm here for this module. Ask me anything about the 80/20 of ai, or paste something back and I'll tell you whether it does what the item is asking for." Below the chat window is a list of 10 tasks under the heading "/in this module":

- 01 ☐ Fluency matters more than the tool
- 02 ☐ Check which model you're on
- 03 ☐ Create Projects
- 04 ☐ When prompting, give AI context
- 05 ☐ Create a Red Team
- 06 ☐ Run your plan past a CF0
- 07 ☐ Break down and rebuild
- 08 ☐ Deep research
- 09 ☐ Use a Voice App
- 10 ☐ Analyse Kite's numbers

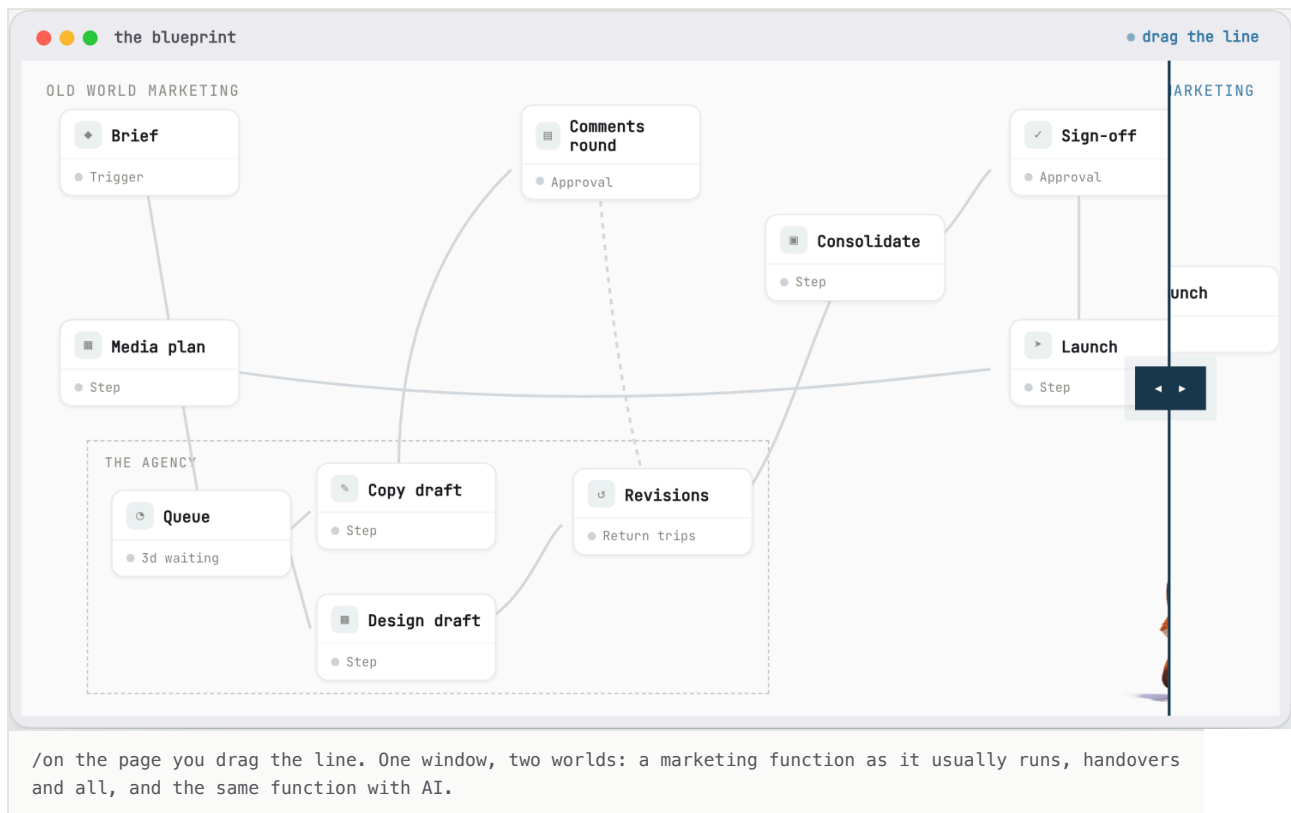

Below the list is a link: "/Library of everything". To the right, there is a section titled "02 Check which model you're on" with a button "OPEN". Below this is a chat window titled "a chat" showing a conversation with "Sonnet 5" and "Opus 5". At the bottom, there is a text block: "An easy but very important thing to understand is that the models don't all behave the same. For example, I use Opus 4.8 (and now Opus 5) on Claude a lot. I find it to be accurate and".

At the bottom of the browser window, the URL is "/the course, module one. Free and live now at runwithfoxes.com/course."

07

Redesigning workflows

Redesigning workflows is the harder work, and it is what my new book is about. It is harder not because of the tech or the tools, but because it is about people: their roles, their responsibilities, and sometimes their identities. We map out the activities and how they flow, from a brief through to campaigns and analysis, including the handovers, the time each step takes, the documents and artefacts created, the tools used, and the sign-offs. Then we re-imagine what is possible, both now and in the very near future, starting from a blank page. This is my core skill, as it is what I did building teams client-side for most of my career.

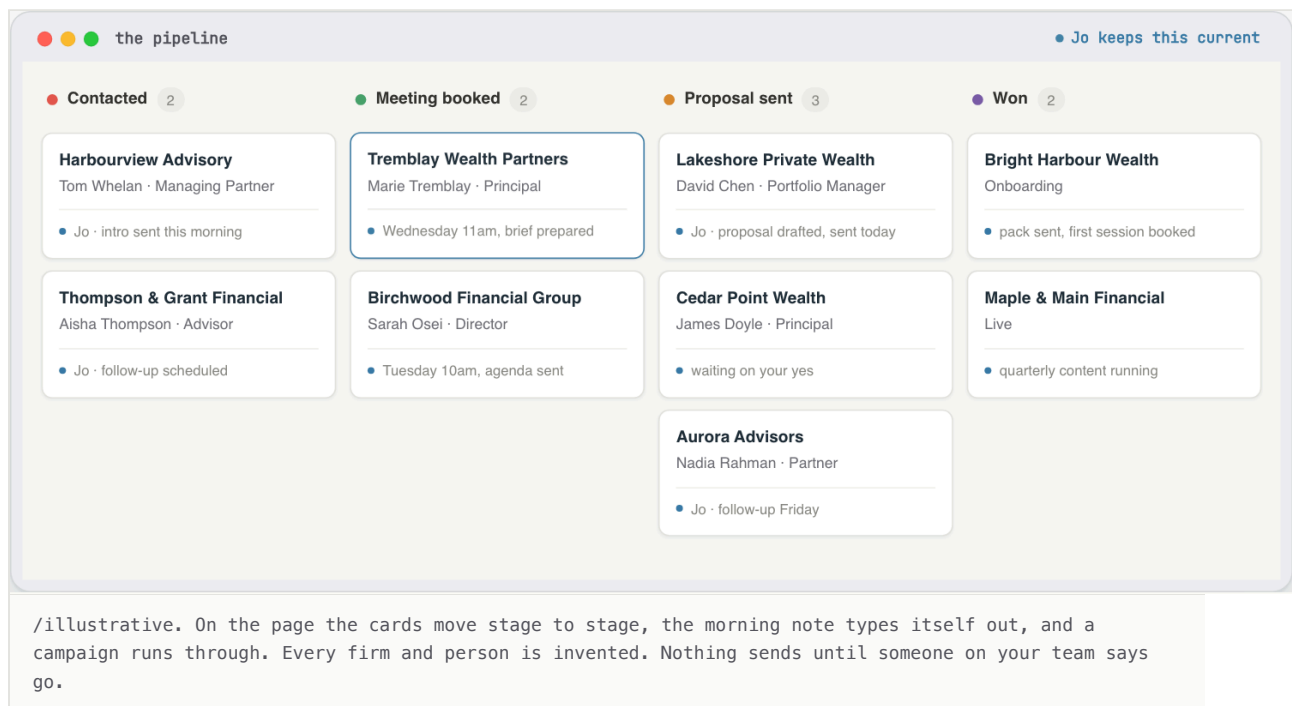

Building agents

Growth Agent

We build Growth Agents for teams. The growth agent does a few things. It is the single point of contact for updating and tracking the pipeline. For example, it opens the dashboard daily for it and the marketer to review together. It does analysis to help uncover blockers.

And most importantly, it runs the outbound campaigns, be that email or LinkedIn, running all the steps from list building to writing the messages, sending and analysis.

AI Writers

I read a lot about how AI writes slop. It does. But it doesn't have to. If you spend time up front. Writers need to know your brand's positioning, your target audience, insights or pain points related to your category. They need to know your brand's messaging, and your tone of voice. On top of that, we need to articulate instructions on how we want the writer to interact with us or our colleagues.

That knowledge is a small folder of documents. Here is what comes out of it, worked through on Kite's own voice.

SUBJECT YOUR RENEWAL IS DUE ON 14 SEPTEMBER

Hi Sarah,

Before it renews, we'll quote the market for you.

Last year most people in your position paid the price they were sent. It was a bit higher than the year before, and paying it beat a fortnight of forms and four websites asking the same eleven questions.

That increase was never compulsory. It was the cost of staying put.

So about three weeks before your date we'll check what everyone else would charge for the same cover. If someone is cheaper, we move you and do the paperwork. If nobody is, you stay where you are. Either way you'll get a note saying what we found and what we chose.

The first time we did this, customers saved €187 on average.

Nothing for you to do.

Aoife

Kite

Hover a dotted line to see what it is made of.

/on the page this writes itself out, and hovering a dotted line shows which brand document that line came from: the positioning, the messaging, an approved proof point, the voice.

Brand Guardian

One of our most recent products is a Brand Guardian. In seconds, it checks whether new work is on or off-brand, looking at hex colours, pixels, copy and photography, and measuring against your brand book rather than judging by eye. It's probably our most complex agent, and still in beta, but I'm very proud of it.

VERDICT Clean	GATES THAT RAN 4 of 4 applicable	MEASURED, NOT JUDGED every line above	RECEIPT written, pinned to the file
------------------	-------------------------------------	--	--

/one of Sabre's real ads, guarded by the machine we run for them. The guardian measures the file against the brand book: symbol size, background colour, headline size, how much of the frame the photograph takes. It works out what kind of asset it is looking at, runs the checks that apply to that kind, and says which ones ran. One verdict, a few seconds per file. A guardian is built for one brand's book at a time.

/on the page you drag the line to see what the guardian sees.

Clients

Starting with the big companies, and with the one I did from the inside, running the teams rather than advising them.

Miro

150 marketers · brand strategy, advertising, marketing communications, the studio

We were spending about \$1.2 million on design and studio work. When I realised what was possible I set a target to reduce it by 20%, and that 20% was the low hanging fruit, the low skill design work.

It took a combination of things. AI to make the images, the video and the copy. A training structure and a training programme. Extra Canva licences. And changes to the brand guidelines and the policies, so that people who were not marketers could serve themselves and move with speed, while keeping everything consistent across the work.

\$1.2m spent on design and studio work → **\$240k** taken out, inside a year

Moloco

50 to 60 marketers

They wanted to hire a copywriter. I persuaded them to let me build copywriters in AI instead, and they use them all the time.

The part that matters is what goes into one. A copywriter is built with the positioning, the messaging framework, the pain points and the proof points. That is what makes what comes out usable rather than generic.

I am also building them a brand guardian, and an AI identity generator, which takes all the elements of their brand identity and reproduces them at speed.

Sabre

AI adoption programme, marketing first

I have been building capabilities for Sabre, and I now work alongside their champion inside the marketing team, their marketing director. A combination of him on the inside and me on the outside.

Together we have designed an AI adoption programme for marketing, which we are rolling out now and will extend into go to market.

Alongside the programme I have built them writers, brand guardians, a search agent, a brief coach to improve the quality of their briefs, and an advertising creative role.

What we'd recommend

Option B. Start by laying out the work the team actually does, area by area, so training aims at the jobs worth changing rather than running as one workshop for everyone. Build the brand pack at the same time, the small set of documents every agent and every person writes from, which is what holds three lines of business to one voice as the volume goes up. Then redesign one workflow at a time with the people who run it, and report the change monthly so the return is visible while it is happening.

Option A is the same first step without the programme around it, and it is the right choice if you would rather see one capability working before committing further. Option C is the whole system across all three lines of business, which is worth doing once the first workflows have proved out.

The price

OPTION A The first measure and a first capability ■ The marketing team's work mapped and measured, area by area ■ The writer, calibrated to Kite's voice and brand pack ■ Two training sessions run on Kite's real work EUR 12,500 plus VAT Four weeks. Tool subscriptions are Kite's own.	OPTION B The adoption programme ■ Everything in Option A ■ Monthly training and working sessions with the team ■ Workflows redesigned one at a time, with the people who run them ■ Output and quality measured and reported each month EUR 5,500 a month Six months, plus VAT. Tool subscriptions are Kite's own.	OPTION C The whole marketing system ■ Everything in Option B ■ Every agent built around Kite's brand and handed over ■ Workflows redesigned across all three lines of business ■ Adoption run to a measured target, reported to the board EUR 14,000 a month Twelve months, plus VAT. Tool subscriptions are Kite's own.
